Climate Justice and Resilient Communities practice worksheet

SWP-032 | Version 1.1.0 | SWEEP Academy

Apply all three lessons to the fictional case below. Do not use identifiable service-user information. Write a reasoned plan that makes uncertainty and decision authority explicit.

Use the laws, professional scope, organisational policies and approved referral routes that apply to your setting. This course is educational and does not replace urgent safeguarding, clinical or legal procedures. All worked cases are fictional. Research notes distinguish published findings from SWEEP teaching examples.

Practice case

A riverside community is considering a raised meeting centre, drainage improvements and transport support during severe weather. Market traders worry about losing work during construction. People in outlying streets say previous planning meetings were difficult to attend. Compare options without assuming that one design benefits everyone equally.

Activity 1

Create a risk-and-capacity map in words for the riverside case. Separate observed information, resident accounts and questions requiring technical advice.

Write your response here

Activity 2

Compare two options from the course case against access, burden distribution, upkeep and decision authority. State what evidence is still needed.

Write your response here

Activity 3

Draft a short accountability plan: one benefit measure, one burden measure, a protected feedback route, an action owner and a review decision.

Write your response here

Self assessment and facilitator discussion

For each activity, use 0 for missing reasoning, 1 for a partly justified response and 2 for a justified response with relevant safeguards and limits. This is a formative rubric, not the platform's certification score.

Activity 1 criteria

The map includes both capacities and barriers, missing voices and source uncertainty. It avoids unsupported event attribution and does not equate attendance with representation.

Activity 2 criteria

The comparison explains trade-offs and who bears them, includes operating responsibilities, and leaves unresolved technical questions open rather than inventing answers.

Activity 3 criteria

The plan can reveal uneven effects, protects complainants, assigns responsibility and explains when evidence would trigger a change.

Next learning step

Identify one assumption you changed and one procedure you must verify locally. Explain who can resolve it before you apply the plan in practice.
