Participatory Research and Practice Innovation practice worksheet

SWP-034 | Version 1.1.0 | SWEEP Academy

Apply all three lessons to the fictional case below. Do not use identifiable service-user information. Write a reasoned plan that makes uncertainty and decision authority explicit.

Use the laws, professional scope, organisational policies and approved referral routes that apply to your setting. This course is educational and does not replace urgent safeguarding, clinical or legal procedures. All worked cases are fictional. Research notes distinguish published findings from SWEEP teaching examples.

Practice case

An advice centre wants to understand why some residents do not return after their first visit. Staff suggest a peer-navigation pilot. Residents want a say in the questions and how findings will be shared. The centre must keep service access separate from any choice to join the inquiry.

Activity 1

Write an answerable question for the advice centre, identify two decisions residents can influence, and explain how someone can refuse without losing services.

Write your response here

Activity 2

Draft a short limitations paragraph for feedback from a small, self-selected group. Identify a disclosure risk and an alternative explanation for an observed change.

Write your response here

Activity 3

Create a one-page pilot brief with scope, oversight, a pause trigger, a change record and a plan for returning findings.

Write your response here

Self assessment and facilitator discussion

For each activity, use 0 for missing reasoning, 1 for a partly justified response and 2 for a justified response with relevant safeguards and limits. This is a formative rubric, not the platform's certification score.

Activity 1 criteria

The question does not presume its answer. Participation roles and limits are clear, refusal is feasible, and the response acknowledges power differences.

Activity 2 criteria

The paragraph limits generalisation, preserves conflicting views, recognises indirect identification and separates observed change from causal attribution.

Activity 3 criteria

The brief identifies required review before data collection, makes pause criteria actionable, records versions and explains how participants will hear and respond to findings.

Next learning step

Identify one assumption you changed and one procedure you must verify locally. Explain who can resolve it before you apply the plan in practice.

Sources and evidence limits
